

Gururaj Allagi

QA Automation & AI Engineer

+91 9880370312 | innovative.gururaj@gmail.com | [LinkedIn: Gururaj-Allagi](#) | [GitHub: Gururaj-Allagi](#) | Bangalore, India

9 years of experience in **Automation Testing, Framework Design, CI/CD Pipelines**, and **AI-driven QA Automation**. Experienced QA Automation Engineer with expertise in building robust frameworks using **Python, Java, Playwright**, and **Selenium**, with hands-on experience integrating **Large Language Models** into test and DevOps workflows. Proven success in Agile environments across networking, healthcare, and electrical domains. Adept in leading QA teams, building AI-powered developer tools, mentoring peers, and delivering high-quality releases through CI/CD practices.

KEY HIGHLIGHTS

- * Reduced QA framework size from **5+ GB** → **under 100 MB** and replaced 10-year-old libs with modern libs
- * Built AI bots handling **Jenkins CI/CD triggering, failure analysis** via natural language
- * Designed a **self-healing Selenium framework** using coordinate-based locator recovery — tests survive XPath changes automatically
- * Built **Playwright + Chrome MCP** pipeline that reads feature docs, navigates the live app, and generates both manual test cases and automation scripts — then validates them in a real browser automatically

WORK EXPERIENCE

Juniper Networks ----- 12/2023 – Present · 2 years 6 months+
QA Engineer 3 | Project: Mist AI

- **Shrunk the QA framework from 5 GB → under 100 MB** by replacing 10-year-old dependencies with modern libs — zero regressions, **5+ teams migrated to the new repo**
- Implemented **Slack-AI integration** to trigger Jenkins CI/CD pipelines directly from Slack channels — teams trigger, stop, and list CI/CD jobs across **15+ cloud environments** without VPN, powered by **GPT-4o** function calling (Engineered a natural language Jenkins controller via Slack)
- Built an **AI-powered Jenkins failure analyzer** that filters console log noise, identifies root cause, and auto-posts structured failure reports to Slack after every build
- Designed a **GitHub Copilot instruction system** that converts meeting transcripts into TestRail-ready test cases, Selenium XPath libraries, and PyTest automation files — end-to-end with zero manual template work
- Built an **AI-driven test generation pipeline** using **Playwright + Chrome MCP server** — AI agent reads feature requirement docs and discussion transcripts, navigates the **live application in real browser**, discovers actual UI elements and XPaths, and auto-generates **TestRail-ready manual test cases + framework-compliant automation scripts** in one workflow
- Enabled **real-time AI browser execution** — generated manual test cases are validated against the live app via Chrome MCP, with the AI agent performing actual clicks, inputs, and assertions in a real browser session, catching UI mismatches before any human runs the tests
- Built a self-healing XPath system — on locator failure, Selenium falls back to stored screen coordinates via `document.elementFromPoint()`, keeping tests alive without manual fixes
- Built **2000+ scalable Selenium test cases** for regression, smoke, and sanity across multiple Mist AI features
- Managed **nightly Jenkins pipelines** across staging and production environments for automated build validation
- Mentored **5 interns** on Python-Selenium best practices, reviewed PRs, and enforced code quality standards
- Developed **AI-powered Git workflow** automation to perform code reviews, auto-resolve merge conflicts, and raise pull requests from Slack commands

TEK Systems ----- 04/2022 – 12/2023 · 1 year 8 months

Associate Test Lead

Client: Schneider Electric R&D

- Led a QA team of 4, conducted sprint planning and daily scrums in Agile environment
- Designed and implemented end-to-end test automation using **Playwright** (Python) with Azure DevOps pipeline integration
- Integrated Docker-based test execution and collaborated with developers for quality gates

Crowning Consulting ----- 05/2021 – 04/2022 · 1 year

Senior Software Engineer

Client: Tata Elxsi

- Automated Android, Web, and Smart TV test cases using **Java and Cucumber**
- Executed manual test cycles and reported defects across multiple platforms

TEK Systems ----- 08/2018 – 05/2021 · 2 years 8 months

Senior Software Engineer

- **Schneider Electric R&D:** Developed **Robot Framework** and Behave-based test suites for web and API testing
- **Citrix R&D:** Automated medical device test cases using **PyTest** and Python
- **Beckman Coulter:** Manual testing and automation using **PyTest** in Python

Emids Technologies ----- 12/2016 – 08/2018 · 1 year 7 months

Associate Software Test Engineer

- Wrote and executed manual test cases for healthcare applications
- Initiated first automation POC using **Selenium + Java + TestNG**; contributed to Keyword Driven Framework

SKILLS

Languages	Python, Java
Test Frameworks	PyTest, Playwright, Selenium, Robot Framework, Behave, Cucumber, Appium
AI / LLM	AWS Bedrock (Claude), Azure OpenAI (GPT-4o), TF-IDF Cosine Similarity, AI Agents, Agentic Workflows, Prompt Engineering, Chrome & Playwright MCP Server
CI/CD & DevOps	Jenkins, Docker, Azure DevOps, GitHub Actions
Reporting & QA Tools	Allure, TestRail, Slack Bot Integration, Model Context Protocol (MCP)
Other	API Automation, Self-Healing Selenium, AI-driven GitOps, S3 (AWS), Intelligent CI/CD Automation, Test Automation Lead

EDUCATION

BMS Institute of Technology | 2011 – 2015 · 4 years

Sub: Electrical and Electronics Engineering

LANGUAGES

English | Kannada | Hindi
